

Neo
Bio®

O&G

Solves most pressing wastewater problems in grease traps

“NeoBio® O&G digests oil & grease, making grease traps and grease vaults nuisance free, easier to maintain.”

In kitchen grease traps

Drop correct number of doses directly into grease trap near the exit pipe, then flush with water if the trap is empty.

If grease traps are emptied daily, the bacteria will be concentrated on the piping and prevent clogging.

What is NeoBio?

An innovative natural cocktail of more than twenty carefully selected bacteria that live for a single purpose: digesting organic waste. They are efficient in both aerobic and anaerobic environments.

How does it work?

NeoBio's microorganisms quickly colonize the grease trap and start to digest organic matter. Crust is eliminated, sludge volume reduced.

How much to apply?

One 25 gram water-soluble sachet for each cubic meter of grease trap. For kitchen grease traps, which are usually smaller than one cubic meter, one sachet is enough.

How often should it be applied?

Daily from one to ten days at first, then once every two weeks will maintain optimum efficiency.

In larger grease vaults

Drop correct dosage directly into grease trap, after making a hole in the crust if necessary. Spread the individual sachets evenly if possible.

Main benefits

Oil and grease are digested, pollution stopped.

Odor disappears in 4 hours.

Bad bacteria are killed.

Sludge volume is reduced, cutting maintenance cost.

Additional benefits

Insects are not attracted anymore since grease is emptied of all nutrients: only minerals remain.

Wastewater pipes will not clog.

Sludge remains liquid, making maintenance easier.

Proven track record

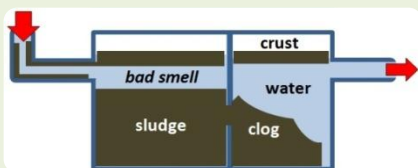

Success story: between April and May 2009 in Bangkok (Thailand), a 34.5% reduction of oil and grease in mg/L (Soxhlet extraction) was obtained after treating a grease vault for one month.

Safe, hassle-free application

The bacteria are harmless to people, animals, fish and plants. However, for hygiene reasons it is recommended to use gloves while manipulating the sachets.

How it works:

Untreated grease trap has bad smell, needs frequent maintenance, pollutes.

Odorless grease trap treated with NeoBio: bacteria free, pollution free, problem free.
