

Spotless Glass & Ceramic Nano Surface Protection

Ref.10001 - Brochure

Spotless Glass & Ceramic is an invisible nanotechnology sealant that makes surfaces water and oil repellent, making them easy to clean. Even calcium stains from dried water droplets become easy to remove from shower glass panels, kitchen tables, ...

Nanotechnology

Nanotechnology is the latest revolution in materials. The Spotless range of surface sealants and cleaning products are manufactured at nano scale (1 nano = 1 billionth of a meter!), which gives them exceptional properties.

Technical characteristics

Composition: hydrolysates and condensate silane compounds, ethanol. Does not contain detergents.

Main benefits: surface sealant providing a high repellence on glass, ceramic and polished marble indoors.

Application: clean the surface with Spotless Abrasive first, this will strip it clean of dirt and traces of cleaning products. Shake bottle well, then spray directly on the surface or on a cloth and apply using U-shaped movements. The product is very economical and applying more than required would not add any benefits. If application is done with a cloth, use a different one for polishing the surface afterwards.

Let dry for 2 minutes, then polish until no trace is left. A mechanical drying, ideally at 90°C during 8 minutes, can be conducted and will provide the best performance as nanoparticles will bond perfectly together. Else let dry at ambient temperature for 60 minutes. Do not touch surface, do not let water get in touch with the surface until drying is complete.

Quantity required: 10 to 25ml per sqm, the product is ready to use and does not require to be diluted.

Lifespan: 3 to 4 weeks, exact lifespan depends on the humidity level the product is exposed to.

Drying time: 60 minutes in ambient conditions, 8 minutes at 90°C.

Maintenance: clean surfaces with a wet sponge or cloth only, chemicals are not needed and will reduce lifespan.

Storage: 1 year shelf life in closed containers. Recommended storage between 5°C and 25°C, away from direct sunlight.

Safety: Spotless Glass & Ceramic is easily flammable and irritant for eyes and skin. See MSDS for full details.

Application examples:

Glass shower walls: in homes, hotels.

Glass shower door: the coated left side is almost free of droplets, the right side is not sealed.

Ceramic and polished marble: sink, bathtub, shelf, table, ...
