

Spotless™ Wood & Stone

Nano Water & Oil-Repellent Protection

Ref.10010

Spotless Wood & Stone is an invisible nanotechnology sealant that repels water and oil. Applicable on most mineral surfaces (concrete, natural stone, marble, wood, ...), it protects from stains, makes surfaces easy-to-clean and increases material's lifespan.

Nanotechnology: a new era of protection

Nanotechnology is the latest revolution in materials. The Spotless™ range of nano sealants and cleaning products are manufactured in Germany at nano scale (1 nano = 1 billionth of a meter), which gives them exceptional properties and lifespan.

Technical characteristics

Composition:

Aqueous preparation, 100% eco-friendly.

Application: with roller, spray, cloth. 20 to 200ml per sqm, depending on how much the substrate absorbs.

Lifespan: up to 10 years.

lasts up to 10 years

repels water & oil

Cleaning: Usage of aggressive chemical cleaning products and methods that damage substrates is not necessary anymore.

Simply clean with a water-soaked brush, sponge or a low pressure water spray. The treatment can withstand cleaning with high pressure water up to 90 bars. For oily stains, use a brush and soapy water, a slight stain may however remain depending on the oil's nature.

Local and international references

Spotless Wood & Stone is referenced in Australia, Greece, Germany, South-Africa and since 2009 in Thailand.

It provides a new level of surface protection in hotel, resorts, condominiums, private homes, pool decks, boats, ...

Stone walls, fountains, ...

Protection is invisible, substrates keep original look and feel, age naturally when exposed to UV.

Wooden walls, handrails, terraces, pool decks, ...

Grout and floors in bathrooms, ...

Shower floor sealed with Spotless™ Wood & Stone at Soneva Kiri resort, Thailand.
